## Program Outcomes

Program Outcomes (POs) represent the knowledge, skills and attitudes, the students should have at the end of a course completion of their respective undergraduate and post graduate nursing program. As per philosophy of Indian Nursing Council, health is a state of well-being that enables a person to lead a productive life at psychological, social and economical aspect. Nursing contributes to the health services in the health care delivery system significantly and aims at identifying health needs of the people, planning and providing quality care in collaboration with other health professionals and community. Undergraduate nursing programme is broad based education within an academic framework directed to the development of critical thinking skills, competencies & standards required for practice of professional nursing and midwifery as per National Health Policy 2002. Under graduate nursing education program prepares the students to become exemplary citizen by adhering to professional ethics and conduct in fulfilling personal, social and professional obligations so as to respond to national aspirations.

### The aim of B. Sc. Nursing Program is

- To prepare graduates to assume responsibilities as professional, competent nurses and midwives in providing promotive, preventive, curative, and rehabilitative services.
- To prepare nurses who can make independent decisions in nursing situations, protect the rights of and facilitate individuals and groups in pursuit of health, function in the hospital, community nursing services, and conduct research studies in the areas of nursing practice. They are also expected to assume the role of teacher, supervisor, and manager in a clinical/public health setting.

### Program Outcomes- After completing the program students will be able

PO1- To apply the knowledge from physical, biological and behavioral sciences, medicine, including alternative systems and nursing in providing nursing care to individuals, families and communities. Graduates will be able to recall and identify foundational nursing concepts, theories, and terminology and apply this knowledge in nursing practice.

PO2- To explain the key nursing concepts, procedures, and patient care techniques nursing process and its application in patient care, including the steps of assessment, diagnosis, planning, implementation, and evaluation

PO3- To apply and translate their theoretical & evidence-based knowledge into practical skills, to manage common clinical conditions, allowing them to provide effective, research-informed care in various clinical settings in order to get improved patient outcomes.

Webiste : www.choithramnursing.com

PO4- To make informed nursing decisions by analyzing patient data, including clinical assessments and diagnostic information, to identify health problems and develop appropriate care plans.

PO5-To design and implement innovative, comprehensive, evidence-based care plans that integrate interdisciplinary knowledge and address complex patient needs.

PO6- To evaluate the effectiveness of nursing interventions and patient care plans by analyzing patient outcomes and making evidence-based recommendations for adjustments and improvements in order to achieve improved patient outcomes.

PO7- To analyze complex patient care scenarios to identify underlying issues, and formulate effective, evidence-based nursing interventions. The graduates have the skills to tackle clinical problems through thorough analysis, leading to more accurate diagnoses and effective treatment plans.

PO8-To investigate and analyze complex patient care problems by utilizing critical thinking and research skills to develop and implement effective, evidence-based solutions.

PO9- To collaborate effectively with interdisciplinary healthcare teams to develop and implement patient-centered care plans that enhance patient outcomes.

PO10- To clearly communicate patient needs, care plans, and progress to team members, ensuring that all aspects of patient care are coordinated and understood.

PO11- To apply ethical principles and professional standards to make informed decisions and provide compassionate, patient-centered care.

PO12- To engage in lifelong learning by actively seeking and applying new knowledge, skills, and advancements in nursing practice to enhance their clinical competencies and adapt to evolving healthcare environments.

## **Program Outcome for M Sc (N) Program**

### **Aim of M. Sc. (N) Program**

- To develop advanced clinical knowledge and specialized skills in nursing practice, enabling graduates to provide high-quality, evidence-based care and to lead clinical practice in their area of specialization.
- To prepare graduates for leadership roles in nursing by enhancing their skills in research, administration, and policy-making, and to contribute to the advancement of nursing science and practice through research and evidence-based initiatives.

### **Program Outcomes of M. Sc. Nursing 2 years Post Graduate Degree- After completing the program students will be able**

PO1- To possess the advanced & specialized knowledge required to lead and innovate in their areas of specialization using a deep understanding of theories and research to drive high-quality patient care and practice

PO2- To explain and interpret complex clinical scenarios and research findings to inform advanced nursing practice and decision-making in their area of specialization.

PO3- To apply their specialized knowledge to develop and implement advanced clinical practices, policies, and programs those are grounded in theoretical and empirical evidence.

PO4- To analyze complex patient data and clinical research to identify trends, evaluate outcomes, and develop evidence-based interventions to improve patient care and clinical practice.

PO5- To integrate information from clinical research, theoretical frameworks, and patient data to create and implement innovative, evidence-based care strategies that address complex health issues and improve patient outcomes.

PO6- To critically evaluate the effectiveness of advanced nursing interventions and clinical practices by analyzing patient outcomes, utilizing quality improvement methods, and making evidence-based recommendations for practice enhancement.

PO7- To analyze complex clinical problems by systematically assessing patient data, identifying underlying issues, and developing evidence-based strategies to address and resolve these issues effectively.

PO8-To conduct comprehensive analysis of complex clinical situations by integrating multifaceted patient data advanced diagnostic tools, and current research to develop and implement effective, patient-centered care plans.
