## Patent Public Search

The Patent Public Search tool is a new web-based patent search application that will replace internal legacy search tools PubEAST and PubWEST and external legacy search tools PatFT and AppFT. Patent Public Search has two user-selectable modern interfaces that provide enhanced access to prior art. The new, powerful, and flexible capabilities of the application will improve the overall patent searching process.

If you are new to patent searches, or want to use the functionality that was available in the USPTO's PatFT/AppFT, select **Basic search** to look for patents by keywords or common fields, such as inventor or publication number. Select **Advanced search** to use full query options as well as to further filter a patent search by database or organize documents through tagging.
